Model Run Funnel

As of May 07, 2026   Last 90 Days   Everyone   Energy Exemplar   Unique Visitors

**The funnel tracking looks broken.**  
The funnel shows:

- Study Overview: **2,465 unique visitors**
- Models: **1,337**
- Select Model: **948**
- Later run-related steps: **0**
- Conversion: **0%**

But the path and retention reports clearly show users clicking run-related actions, including **216 visitors** qualifying for “Models > Run Models button” retention. So the funnel event definitions or ordering likely do not match actual user behaviour.

**Conversion**  
**0%**  
0 of 2465 unique visitors

**Users are reaching run intent, but the path is fragmented.**

From “Select Model,” users go mainly to:

- **Run > Recommendation:** 49%
- **Run Button across pages:** 24%
- **Other:** 22%

This suggests users are trying to run models, but the product has multiple competing run entry points.

**“No next step” after Select Model is a concern.**

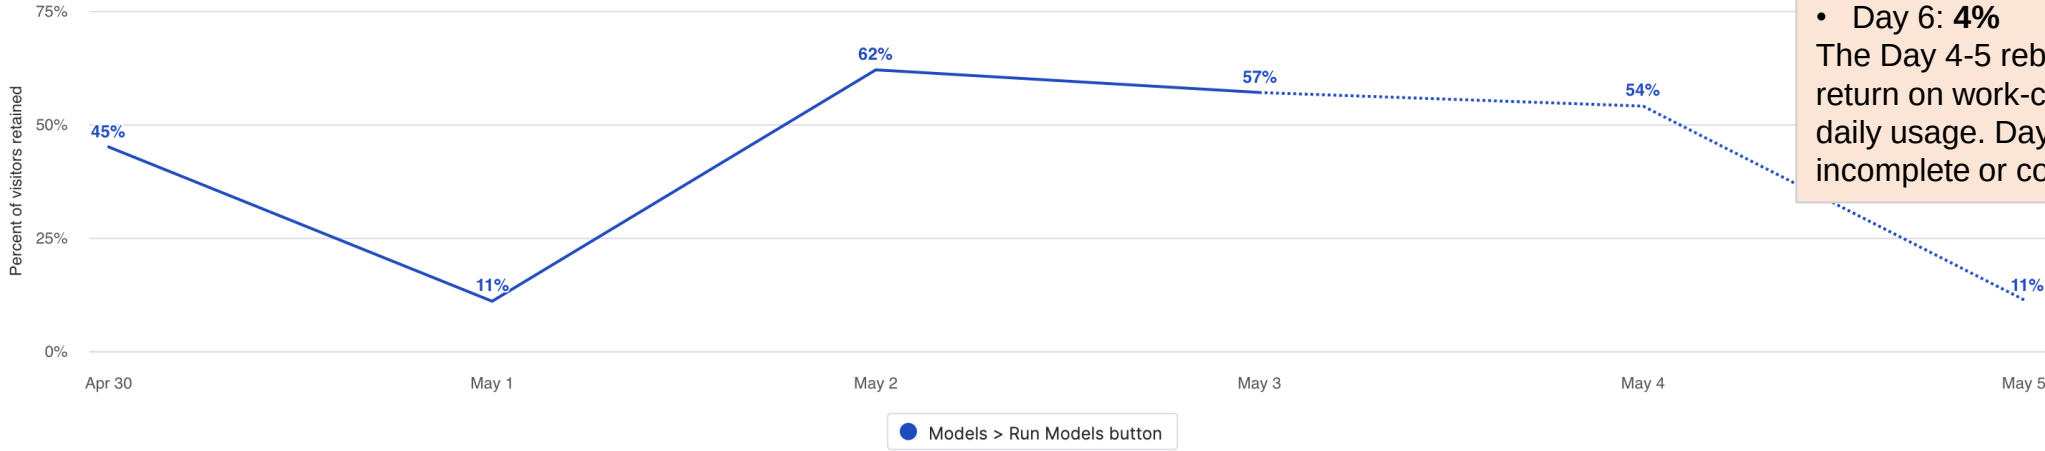

After the Models page, **2,898 Select Model clicks** lead to **100% No next step** in one branch. This may indicate:

- event tracking gap,
- page transition not captured,
- users selecting a model but not understanding what to do next,
- or the next interaction occurs in a component not instrumented.

Model Page Analysis - Retention

Run Model Button Retention

As of May 07, 2026   Last 7 days   Everyone   Energy Exemplar   All Accounts   Visitors   Day 1   Models > Run Models button

Retention is uneven but not terrible.

For users who clicked “Models > Run Models button”:

- Day 1 retention: **36%**
- Day 3: **26%**
- Day 4–5: **38%**
- Day 6: **4%**

The Day 4-5 rebound suggests users may return on work-cycle patterns rather than daily usage. Day 6-7 data is probably incomplete or cohort-sensitive.

Run Model Button Retention

As of May 07, 2026   Last 7 days   Everyone   Energy Exemplar   All Accounts   Visitors   Models > Run Models button

| Cohort   | Visitors | 0 Day  | 1 Day | 2 Day | 3 Day | 4 Day | 5 Day | 6 Day | 7 Day |

**Simplify the run journey**

There appear to be multiple run-related routes. Consider one dominant CTA after model selection

**Select Model → Configure Run → Run Model → Simulation Created**
